

Weather Forecast for Today: Fair.

Mines and Mining Stocks

GOLD SPRINGS MERGER SCHEME

Deal Is Incubating That Involves Mining and Milling on Extensive Scale.

C. A. Short was in the city yesterday on his way east in connection with a big deal that is said to be brewing for the Gold Springs district in Iron county. It was impossible to get track of him before he left, but it was learned that the proposition in hand is nothing less than the merger or consolidation of several of the biggest properties in the camp from which he hails.

It was said during the afternoon that the Jennie, the Jennie Extension, the Snowflake and the possibly the Nevada and other properties down there, would be taken hold of by a combination of capital which stands ready to cut loose in broad-gauge fashion, providing it can secure the territory it considers essential to the making of a great mining enterprise.

Exposed in the properties mentioned and pretty well developed in some of them, are tremendous ledges of gold ore that will run from \$5 to \$10 and \$20 a ton. The proposition, it is declared, is to combine all these properties and provide reduction works capable of handling a great tonnage. Amalgamation, concentration and the cyanide processes will be combined in the works contemplated, while furnaces for the reduction of the various products to gold bullion will also be installed.

While the proposition is still in the incubative stage, the claim is made that the preliminary examinations have been made and the feasibility and great merit of the plan has been fully looked into. Now the real work of bringing the various interests together has commenced, and the belief is that the scheme will be matured within a short time. While nothing on that point could be learned, it is presumed the scheme also includes the big power plant undertaking that has been rounded out for Modena, and which is designed to supply cheap power not only to the Gold Springs district, but to Pioche as well.

TINTIC SILVER CROWN CLOSES BIG STOCK DEAL

The Tintic Silver Crown Mining company, through Manager M. L. Snow, has just closed a deal with eastern people for the sale of \$30,000 shares of its treasury stock at a price which gives the company better than 10 cents a share, thus providing a splendid working fund for development purposes. It was an account of this deal that the par value of the stock was raised after the week from 10 cents to \$1 a share. With the funds thus provided the management is sanguine of making a good paying proposition of its 500 acres of territory. The twenty-seven claims embraced in the company's holdings have all been surveyed and patented by J. E. Johnson, the deputy mineral surveyor, and the maps have been completed. Concerning the plan of campaign that is to be pushed during the present season, and which is relied upon to accomplish substantial results, Manager Snow says:

"A force of men will drive a tunnel on the Galena No. 1 claim, where a three-foot vein of silver ore outcrops near the creek. Less than 100 feet in this tunnel should tap the vein. This tunnel site has a possible vertical depth of 1,300 feet on the great oxidized quartzite ledge that runs so prominently through the property. Up to date, not a single foot of work has been done on this unusual outcrop.

A prospecting tunnel will also be run under the present tunnel blowouts along the granite dyke where Oriental claims Nos. 1 and 2 end on. This surface aside of iron, silver, lead and zinc, and 50 cents in gold. By driving in a tunnel near the roadside at the foot of the hill, a vertical depth of over 1,000 feet may be attained in these claims run up to the old patented Walker property in Benion canyon, where one tunnel produced over 1,000 tons of rich ore. The face of the tunnel now shows three feet of fine galena.

A tunnel has already been commenced on the Silver-Colored No. 4 claim to tap the great fissure vein that outcrops on the big hill near the International patented property that years ago produced considerable pay ore. That property has a tunnel and incline of 700 feet. The Silver-Colored fissure has been stripped and proved for over 100 feet. From it ore may be knocked right off the surface worth \$20 to the ton. The tunnel should reach the vein in about 100 feet.

Then, it is proposed to put a force of men on the Silver-Colored clearing out the refuse from the cave of last fall. That cave-in temporarily dashed to the ground the company's hopes of doing some shipping last year. The accident occurred when the miners had extracted some fifty sacks of \$75 silver-lead ore. The workings will be timbered and the interesting work of clearing and sacking the first class ore from the eight to twenty-four-inch vein will be inaugurated once more."

Ore and Bullion.
Ore and bullion settlements in this city yesterday, as reported by McCornick & Co., amounted to \$100,000, as follows: Silver, lead, gold and copper ores, \$25,000; base bullion, \$75,000.

Metal Market.
Silver, 90¢ per ounce.
Copper (cathodes), 12½¢ per pound.
Lead, \$4.00 per 100 pounds.

RICH STRIKE IN MAGNOLIA

Bamberger - De Lamar Company Has New Bonanza Gold Producer.

Samples of free gold-bearing ore from a recent big strike in the Magnolia property of the Bamberger-DeLamar company are on exhibition at the company's local offices, where they are attracting considerable attention. No less than eight feet of ore from the deepest workings is now being mined and hauled over the hill from the Magnolia ground to the company's big mill plant for treatment. This ore runs from \$30 to \$100 per ton, and something like forty tons a week of it is now being delivered. In addition to the eight-foot ledge of this character of ore, there is a streak on one of the ledges that runs from six to eighteen inches in thickness that carries values up to \$5,000 a ton.

Manager Sidney M. Bamberger stated yesterday that the best kind of reports were now coming from the company's Magnolia holdings, and that it was probable that, in the near future, a tramway would be constructed to handle the ore between the property and the mill, a distance of something like three miles, the haul by wagon is slow and costly in comparison with what it ought to be. Up to a short time ago the company has allowed leasers to work the Magnolia, as the main ore bodies, that had proven so productive in surface workings during the early history of the mine, had not been opened up at depth. Now that the ore has been tapped below and the ledge is proving strong and rich, the company will pay every attention to its further development, with the idea that it will soon prove a most important unit in the productive capacity of the company's mines.

The Bamberger-DeLamar company has been producing at the rate of about \$35,000 a month, gross, for some time past, and now that the Magnolia gives such splendid promise of making a big bonanza, the future of the proposition looks better than it has done for a long time. The company now markets its products at the United States assay office in this city, instead of sending it east, as formerly, and at a nice saving for transportation, etc.

BOSTON COPPER NEWS OVER POLLOCK WIRES

Lake copper sold today at 12½¢ cents, although the tonnage booked was not large. Electro was firm at 12½¢, and some of the better affected this morning at the lower quotations; sales are being made from day to day, the purchasers being domestic consumers, but the amounts involved are small.

Pursuing its policy of keeping its monthly output of copper around the 2,000,000 pound mark, the Copper Range company, the Old Dominion has laid off about 150 men and has stopped work entirely in the western country. This latter action was a precautionary measure, however, by reason of increased flow of water due to the usual spring freshets.

The annual report of the Copper Range company for the year ending Dec. 31, will make a very interesting exhibit for the period handicapped in the point of net profits at least by a comparatively low metal market. The company will show for the past year that its \$4 per share dividends have been earned within the narrow margin of a few thousand dollars.

Superior & Boston has made a commendable record for the past year, the company has been shipping ore from the Great Eastern mine for ten months. These shipments have averaged 40 tons per day, the ore averaging better than 7 per cent copper and 4 ounces of silver per ton. The gross returns for the month of February were something over \$100,000.

J. P. Channing, consulting engineer for the Miami Copper company, says: "The shipments of copper ore from the Miami mine for the month of February were something over \$100,000, which will give an average assay of 2½ per cent copper. We are not planning to put any more ore in sight at this time, but to devote all our attention during the balance of this year in getting the mine in shape for production."

DOINGS OF UNLISTED STOCKS ON EXCHANGE

During the open board trading yesterday Pioche King was sold for 25¢ a share, Utah Treasure Hill at 25¢ to 24¢, and Verilyon Nipper at 3¢.

Decker Canyon was quoted at 7¢ at 10¢, Kachina at 10¢ at 11¢, Daily at \$1.40 at \$1.40, Ely Witch at 17¢ at 20¢, Emma Copper at 3¢ asked, Inspiration at 4¢ bid, Naldriver at 15¢ bid, and Schwab Consolidated at 3½¢ at 4½¢ a share.

INTERNATIONAL IS MOVING FAST

Gets Refinery With Capacity of 26,000,000 Pounds a Month—To Rush Utah Plant.

(Special to The Herald.)
New York, April 1.—It is verbally announced that the International Smelting & Refining company has purchased the refining business of the United Metals Selling company, which was conducted by the Raritan copper works. This refinery has a capacity of 26,000,000 pounds of copper a month, and is now running full. The transfer of the business is made as of January 1, 1909, as the trade for the refinery was made at that time. A portion of the purchase price was made in stock of the International Smelting & Refining company and the remainder in cash.

The building of the smelter of the International company in Utah has been under way since the first of the year, and within thirty days seven miles of railroad will connect the new smelter site with the San Pedro, Los Angeles & Salt Lake railroad. The important contracts for the building of the smelter have been let, and it is expected to be in operation before January 1, 1910.

This smelter will have a minimum capacity to start with of 2,000 tons a day, and will be a direct competitor of the Garfield plant of the American Smelting & Refining company, which the latter company has expended to date \$6,500,000. The International smelter in Utah will be modeled after the lines of the Washoe smelter in Montana.

Sufficient capitalization has been provided to take over the Raritan copper works, to build the Utah smelter and to furnish ample working capital. The Utah smelter has already made contracts for practically the entire capacity of the works to be erected. It is likely that the capacity will be enlarged before completion.

MINING STOCK EXCHANGE.

Market is Now Simply Waiting for Something to Turn Up.

The local mining stock market is at a standstill so far as any movement in prices is concerned. There is a little quiet buying of the better stocks, but no effort is being made to either advance or depress prices. It looks as though everything was scrapping along the bottom, and that when a change comes it will be for the better. Brokers believe that now is the time to buy, contending that a bull movement is likely to be precipitated at any time.

During the two regular and open board calls yesterday a total of 102,500 shares of stock, with a selling value of \$75,225.37, changed hands.

Following is the list of final quotations and record of sales made during the day:

At Ease Among the Well-Dressed Crowd

With the coming of sunny days and bursting buds, throngs of promenaders and pleasure-seekers will soon make their appearance. And it will be a well-dressed crowd, reflecting the best efforts of those whose energies are devoted to creating "style" that the appetite of mankind for elegance may be satisfied.

Where is the man, woman or child that has not the desire to be as well dressed as the average? Many strive to be the best dressed. Dressing correctly doesn't imply vanity, neither does it compel extravagance. With MEN it means discretion and the ability to discriminate between false appearance and real value.

Gardner Clothes represent the most correct styles, the finest tailoring and the very best fabrics, yet there are men in this town who are deceiving themselves by having their suits "made to order" and paying for them double, or more, what we would charge them for the very same quality, plus a whole lot more style.

Gardner Suits for spring, \$10 to \$40. May we have the pleasure of making a personal demonstration? We'll contribute our time. Will you?

SEVEN TROUGHS ACTIVITY.
Coalition Is Rapidly Developing Into a Bonanza Mine.

Mazuma, Seven Troughs, March 31.—Work is going ahead in good earnest on the Seven Troughs Coalition. The great-est of the Seven Troughs is the Kingdome claim, in addition to which they have encountered high grade ore in the Whihua lease, and the main workings of the mine on the Kingdome claim will soon be in active competition with the leases.

In the Whihua lease they have four up-raises opened up at the 25-foot level, and the drift is out in the west 20 feet. Eleven men are working in ore, and the lease is getting ready for its next shipment. In fact they could begin shipping today if the Kingdome claim was ready for the reception of ore. It will not be more than a day or two at most, that shipping will begin. In a very short time they will put on a night shift at the Whihua and this will also be employed on the 35-foot level. They are now sinking a shaft from the 25-foot level to the 45-foot level for the purpose of making a connection and when this work is completed they will put on a night shift. A cross-

cut is being run from the drift into the south for the prospecting of hitherto unexplored country.

Soon they will begin sinking from the 35-foot level and will advance the depth of the mine another 100 feet, making the total incline depth in the neighborhood of 200 feet. At this level the biggest results yet had from the mine are looked for, for it is expected that the Kingdome and Whihua veins come together at that depth and that there will be opened up at the intersection the greatest showing that has ever been made in the district. Both veins have yielded wonderfully rich ore up to date, and there seems to be no good reason why the two rich shoots will not run together with great depth.

This ought to develop a big body of the richest ore yet turned out in the district. The strike in the Merger lease is not far enough along to determine what it may amount to, they having run into the high grade only two or three days ago. The strike was made in the drift at the 150-foot level, where they have been getting out good milling ore, ranging in value from \$13 to \$30 a ton. They had been between two minds as to the treatment of this ore; one plan being to ship it to the mill of the London syndicate when that plan was completely abandoned, and to put up a small mill of their own on the Merger ground. The latter plan is now being considered, and it is expected that arrangements can be made this week to put up the mill.

In the main workings of the Coalition, on the Kingdome vein, they have sunk the latter shaft to a depth of 300 feet, which was the depth determined upon when they abandoned the Whihua ground workings. They are now cross-cutting for the Kingdome vein, which is one of the richest in the district. Before the underground workings were abandoned they had taken from the Kingdome 1,000 tons of ore which averaged \$60 a ton, completely the vein in the Whihua richer than ever in the Whihua lease. The outlook for the Coalition is apparently very great.

The mill of the London syndicate, it is expected, will be completed on the 15th of April, but they will begin receiving ore from the Kingdome vein before it is finished, and in them the ore will be stored in readiness for the dropping of the stamps in the mill. It is expected that the first shipment will be from the Snowflake, to be followed by shipments from the Signal Peak and the Cleghorn lease.

JACOB MORITZ HEADS A PLACER MINING COMPANY
The Wilson Mesa Placer company of Salt Lake incorporated yesterday, and takes over the Utah 100-acre and the Mink 100-acre mining claims in Grand county. Capital is \$100,000, in shares of 10¢ each. Jacob Moritz is president; L. J. Wood, vice president; James S. Hyde, secretary and treasurer, and these, with J. Butterworth and G. B. Kelly, are the directors.

The Black Pine Mining & Milling company, with headquarters at Salt Lake, filed articles of incorporation Thursday and will exploit claims in the Hogman mining district, White Pine county, Nevada. The capital is \$50,000, in shares of the par value of 15¢ each. Charles E. Nickels is president; C. W. Tholen, vice president; Harry F. Horton, secretary and treasurer, who with L. A. Justesen and Arvid Johnson, compose the directorate.

The Tintic Volcanic Mining company of this city is also incorporated. It takes over the volcanic mining claims Nos. 1 and 2, located in the Tintic mining district, Utah county, in full payment of the capital stock of \$100,000, divided into 1,000,000 shares of 10¢ each. R. A. Barney is president; Nick Comes, vice president; E. H. McBeth, secretary and treasurer; F. Tishner and John Tishner, additional directors. The treasury stock is \$60,000 shares.

Additional Mines on Page 9.
Everybody knows those good ice cream cones made by J. W. Walsh & Co., 414 South State street.
